

AUTOMATED URINALYSIS SYSTEM

UriSed Cascade

HIGHER THROUGHPUT / IMPROVED EFFICIENCY

- / Combines two UriSed 3 PRO instruments and one LabUMat 2 instrument:
Chemistry and sediment analysis in one system
- / Throughput: up to 200 tests/hour
- / Walk-away operation
- / Revolutionary particle visualization and recognition utilizing both bright-field and phase-contrast microscopy
- / Zoomable HPF-like images
- / Dual-view for both bright-field and phase-contrast images
- / Fully automated sample preparation requiring only low sample volume
- / Manual microscopy mode: Real-time view of any viewfield of the cuvette to see moving microorganisms as well
- / No need for liquid reagents or calibrators
- / Automated QC analysis and maintenance procedures
- / Streamlined documentation by LIS connectivity

UriSed Cascade is an automated urinalysis system for hospitals and laboratories processing up to 200 urine samples per hour, providing reliable urine chemistry and urine sediment results in an instant. The system offers uniquely advanced visualization and recognition of formed elements in urine sample using a special combination of bright-field and phase-contrast microscopy by automating the gold standard method of sediment analysis. It improves differentiation of hyaline casts, red blood cells, crystals, yeast and overall diagnostic performance in central screening laboratories as well as in specialist laboratories.

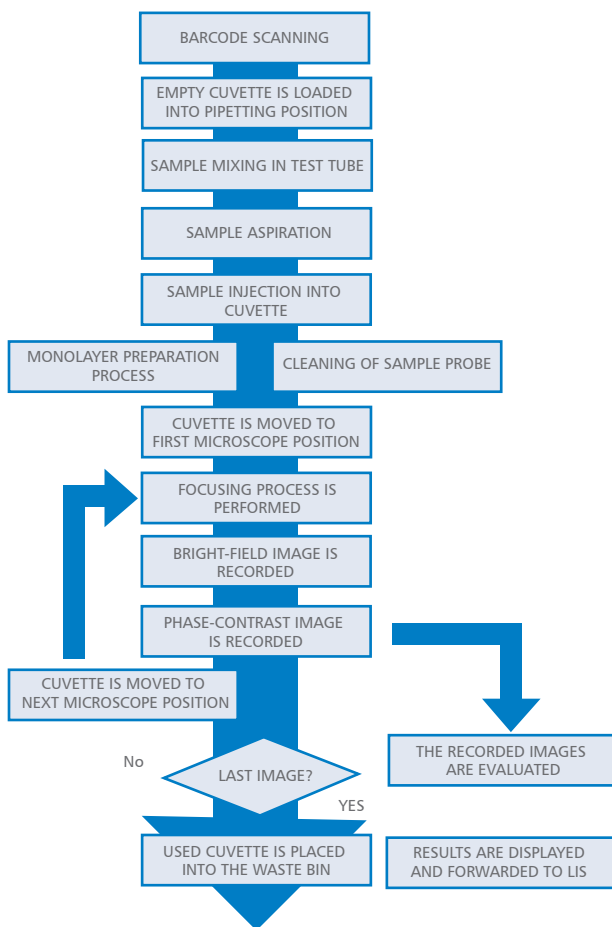

• Certified Management System
• DIN EN ISO 14001
• EN ISO 13485
• EN ISO 9001

URINE PARTICLES WITH OUTSTANDING DEFINITION AND CLARITY

PATENTED MEASUREMENT PROCESS

TECHNICAL SPECIFICATIONS

Auto-detected particle classes: Red Blood Cells (RBC); White Blood Cells (WBC); WBC Clumps (WBCc); Hyaline Casts (HYA); Pathological Casts (PAT); Squamous Epithelial Cells (EPI); Non-Squamous Epithelial Cells (NEC); Bacteria Cocci (BACc); Bacteria Rods (BACr); Yeast (YEA); Mucus (MUC); Amorphous material (AMO); Sperm (SPRM); Crystals (CRY): Calcium-oxalate monohydrate (CaOxm), Calcium-oxalate dihydrate (CaOxd), Uric acid (URI), Triple phosphate (TRI), RBC ghost and RBC-Aca flags.

Further classes for manual sub-classification are also available

Other evaluated parameters:

Bilirubin, Urobilinogen, Ketones, Ascorbic acid, Glucose, Protein, Blood, pH, Nitrite, Leucocytes via LabStrip U11 Plus (GL) urine test strip Specific gravity, Color, Turbidity via PMC (Physical Measurement Cell) module

Technology: Cuvette based automated microscopy and image processing / Reflectance photometry

Throughput: Up to 200 tests/hour

Magnification: Zoomable HPF-like images

Displayed images: Phase-contrast, bright-field and composite

Min. sample volume: 2.0 ml (checked by liquid level sensor)

Barcode reader: Built-in

Printer: Optional, external (connected to operating PC)

Interfaces: USB, LAN, RS232 serial port

LIS connectivity: LIS2-A2 or HL7

Consumables: LabStrip U11 Plus GL test strip/ UriSed cuvette

Consumable traceability: RFID tag, RFID based rack identification

The operation of the urinalysis system is based on the patented UriSed Technology. Working without any special liquid reagents, UriSed Cascade performs sample preparation, produces whole viewfield microscopic images and evaluates them using the Artificial Intelligence-based Evaluation Module (AIEM), a high-quality image processing software.

Using the phase-contrast technology UriSed Cascade provides improved performance. It has outstanding visualization and recognition capabilities for every particle type even the ones that conventional bright-field microscopy cannot easily detect (such as casts and ghost red blood cells).
